**EVIDENCE SYNTHESIS BRIEFING NOTE**

**TOPIC:** PAID SICK LEAVE BENEFITS DURING THE COVID-19 PANDEMIC

*Information finalized as of February 17, 2021.*

This Briefing Note was completed by the Research, Analysis, and Evaluation Branch (Ministry of Health). Please refer to the [Methods](#) section for further information.

**Purpose:** This note summarizes the impact of providing employees with sick leave (paid or unpaid) during the COVID-19 pandemic, including individuals who are ill and have tested positive for COVID-19 and who are awaiting test results.

**Key Findings:**
- Countries responded to the economic shock resulting from the COVID-19 outbreak and associated containment by introducing social and labour market measures to support workers and their family. This response has, in many countries, included expansion of paid sick leave, which has played a key role in protecting incomes, health, and jobs.
  - **Take-up of sick leave benefits:** At the peak of the outbreak in March 2020, take-up of paid sick leave roughly tripled in Sweden and doubled in Italy, before reverting to normal levels. In most OECD countries, approximately 4-6% of all employed workers were on paid sick leave in the most critical period.
- Sick leave policies in the United States (US), including the Families First Coronavirus Response Act (FFCRA), have been associated with the following:
  - **Economic protection:** Job losses and working hour reductions during the COVID-19 outbreak have increased in US states that have no laws for paid sick days.
  - **Isolation and physical distancing:** After introducing the FFCRA, recipients’ daily hours spent at home increased (4.2%), and there were decreases in the average hours not at home per day (7.7%) and working hours (6.1%).
  - **Reduced COVID-19 transmission:** According to a study (2020) on the COVID-19 emergency sick leave in the US, the FFCRA has helped contain the spread of the virus by permitting infected workers to stay at home; between March 6 and May 22, 2020, the policy was associated with approximately 400 fewer COVID-19 cases per state per day (one case per 1,300 workers), representing a 56% decrease in infections in these states.
  - **Reduced transmission of influenza-like-illness (ILI):** Several US-based studies have reported that the provision of paid sick leave coverage at state and local levels has induced contagious employees to take sick leave, thereby reducing influenza activity during normal times.

**Analysis for Ontario:**
- Since the introduction of paid sick leave has been associated with increased physical distancing, reduced transmission of COVID-19 and ILI, and economic protections in other jurisdictions, comprehensive paid sick leave policies that cover all workers in Ontario, including the self-employed, are recommended.

---

*a This briefing note includes current available evidence as of the noted date. It is not intended to be an exhaustive analysis, and other relevant findings may have been reported since completion.*
Supporting Evidence

Table 1 below summarizes the documented effects of introducing leave policies in response to the COVID-19 pandemic. In the Appendix, Table 2 provides details about COVID-19 paid leave policies that are currently in place in selected jurisdictions (Canada [federal], Yukon Territory, United States [US], United Kingdom, New Zealand), and the impact that the Families First Coronavirus Response Act (FFCRA) has had in the US.1,2,3,4,5,6,7,8,9 In addition, Table 3 summarizes the expanded access to sickness benefits for self-employed workers across 29 countries in the Organisation for Economic Co-operation and Development (OECD).10

Table 1: Effects of COVID-19 Leave Policies

<table>
<thead>
<tr>
<th>Scientific Evidence</th>
<th>Existing Paid Sick Leave Policies</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>• A US study (2020) reported that, as of July 2020, guaranteed paid leave for personal illness is currently available in 193 United Nations (UN) member states; 27% of countries do not guarantee paid sick leave from the first day of illness, which is considered to be essential to encouraging workers to stay home when they are sick and therefore preventing spread; 58% of countries do not have explicit provisions to ensure self-employed and gig economy workers have access to paid sick leave benefits.11</td>
</tr>
</tbody>
</table>

Effects of Paid Sick Leave Policies in the United States

• Economic protection
  o A US study (2020) reported that job losses and working hour reductions during the COVID-19 outbreak have increased in states that have no laws for paid sick days.12

• Isolation and physical distancing
  o A US study (2020) reported that after introducing the federal paid sick leave policy, Families First Coronavirus Response Act (FFCRA), recipients' daily hours spent at home increased (4.2%), and there were decreases in the average hours not at home per day (7.7%) and working hours (6.1%).13

• Reduced COVID-19 transmission
  o The FFCRA has helped contain the spread of the virus by permitting infected workers to stay at home; between March 6 and May 22, 2020, the policy was associated with approximately 400 fewer COVID-19 cases per state per day (one case per 1,300 workers), representing a 56% decrease in infections in these states.14

Paid Sick Leave and Influenza-like-illness (ILI)

• Reduced influenza transmission
  o Several US-based studies have reported that the provision of paid sick leave coverage at state and local levels has induced contagious employees to take sick leave, thereby reducing influenza activity during normal times.15,16,17 For example:
    ▪ A 2020 study reported that mandating employee access to paid sick leave led to a reduction of 290 ILI cases per 100,000 patients per week (11% decline) in the first year after such a guarantee was enacted into law.18
    ▪ A 2017 US-based study reported that controlling for gender, race/ethnicity, education, and income, access to paid sick days was associated with a higher
probability of staying home for an employee’s own illness/injury, ILI, or influenza, and for a child’s illness/injury.\(^{19}\)

- Two US-based studies (2017, 2018) have suggested that improved access to paid sick leave in some regions and cities in the US has reduced influenza-type disease rates by 10%, and total work absence by 18%, \(20,21,22\).\(^{b}\)
- The 2017 study further reported that population-level influenza-like disease rates decrease after employees gain access to paid sick leave.\(^{23}\)

### International Scan

**Expansion of Paid Sick Leave Policies**

- COVID-19 has prompted policy responses in many countries, including paid sick leave reforms, aimed at simultaneously protect the health, jobs, and income of sick and quarantined workers.\(^{24,25}\)
- A July 2020 report from the Organisation for Economic Co-operation and Development (OECD) stated that in response to the COVID-19 pandemic, many countries have resorted to, substantially expanded, or even initiated paid sick leave policies. Crisis response policies now include one or more of the following:
  - Strengthening support to employees suffering from COVID-19; extending support to quarantined employees; expanding access to paid sick leave, especially for self-employed workers (see Table 3 for more detail); and lowering the burden of employers to finance paid sick leave.\(^{26}\) (For details, see the OECD’s policy table).
  - Virtually all crisis response policies on paid sick leave were temporary and limited to workers suffering from COVID-19 or placed in mandatory quarantine.\(^{27}\)

- **Sick leave benefits for self-employed workers**
  - The OECD report (2020) stated that sickness benefits have been expanded to include self-employed workers in many countries; almost all are time-bound and limited to COVID-19 sickness or quarantine.\(^{28}\) For details, see Table 3.

- **Take up of sick leave benefits**
  - The OECD report (2020) stated that at the peak of the outbreak in March 2020, take-up of paid sick leave roughly tripled in Sweden and doubled in Italy, before reverting to normal levels; In most OECD countries, approximately 4-6% of all employed workers were on paid sick leave in the most critical period.\(^{29,30}\)

### Canadian Scan

**Canada’s Sick Leave Policies**

- **Unpaid Sick Leave Policies:** Since March 2020, the Canadian government and several provinces have introduced unpaid, job-protected leaves to mitigate the impact of COVID-19 (BC, AB, SK, MB, ON, NB, PEI, and NL).\(^{31,32,33,34,35,36,37,38,39,40}\)

- **Paid Sick Leave Policies:** In addition, the Canadian federal government and the Yukon have introduced paid sick leave policies:
  - The Canada Recovery Sickness Benefit (CRSB) was designed to make it easier for workers to follow public health advice urging people to stay home if they are sick; $450 after taxes per week are provided for up to two weeks.\(^{41}\)
  - The Canada Recovery Caregiving Benefit (CRCB) provides income support to employed and self-employed individuals who are unable to work because they must care for a child (under 12 years) or a family member; $450 after taxes per week are provided for up to two weeks.\(^{42}\)

\(^{b}\) The 2018 study on sick leave mandates (Stearns & White, 2018) was not freely publicly available, and the reported findings are based on information that was included in the article’s abstract.
Yukon’s Paid Sick Leave Rebate supports workers and self-employed people by providing 10 days of wages per employee to allow for sick leave and/or a 14-day self-isolation period to a maximum daily rebate of $378.13. For details, see Table 2 in the Appendix.

Methods

The COVID-19 Evidence Synthesis Network is comprised of groups specializing in evidence synthesis and knowledge translation. The group has committed to provide their expertise to provide high-quality, relevant, and timely synthesized research evidence about COVID-19 to inform decision makers as the pandemic continues.

For more information, please contact the Research, Analysis and Evaluation Branch (Ministry of Health).
## APPENDIX

### Table 2: Selected COVID-19 Paid Leave Policies Across Jurisdictions

<table>
<thead>
<tr>

</thead>
</table>
| Canada Canada Recovery Sickness Benefit (CRSB) | • The CRSB program is administered by the Canada Revenue Agency (CRA).  
• CRSB provides income support to employed and self-employed individuals who are unable to work for reasons related to COVID-19.  
• Eligible applicants can receive $500 ($450 after taxes withheld) for a one-week period. | • Applicants must be unable to work at least 50% of their scheduled work week because they are self-isolating for one of the following reasons:  
  o They are sick with COVID-19 or may have COVID-19;  
  o They are advised to self-isolate due to COVID-19; or  
  o They have an underlying health condition that puts them at greater risk of getting COVID-19.  
• They did not apply for or receive any of the following for the same period:  
  o Canada Recovery Benefit (CRB); Canada Recovery Caregiving Benefit (CRCB); Short-term disability benefits; Employment Insurance (EI) benefits; or Québec Parental Insurance Plan (QPIP) benefits.  
• They reside in Canada;  
• They were present in Canada;  
• They are at least 15 years old;  
• They have a valid Social Insurance Number;  
• They earned at least $5,000 in 2019, 2020, or in the 12 months before the date they applied for the benefit. | • The benefit is available between September 27, 2020 and September 25, 2021.  
• Applicants can no longer receive CRSB payments after they reach the maximum of two periods (i.e., two weeks). | • None available. |

| Yukon                  | The Paid Sick Leave Rebate supports Yukon workers and self-employed people without paid sick leave to stay at home if they:  
  - Become sick; or  
  - Are required to self-isolate while still meeting their basic financial needs.  
  - The rebate reimburses Yukon employers who pay their employees to:  
    - Take sick days; and  
    - Self-isolate. |  
  - Applicants is not receiving paid leave from an employer for the same period.  
  - Employers and their employees must be Yukon-based.  
  - Yukon-based businesses that meet three of the following:  
    - Has an office with a physical address in Yukon;  
    - Is subject to the Yukon Income Tax Act;  
    - Is registered as per the Business Corporations Act or the Partnership and Business Name Act, where applicable; or  
    - Has a valid municipal business licence where applicable.  
  - Employers who pay employees to take time off for sick leave and need to be in self-isolation due to COVID-19.  
  - This rebate is not available to:  
    - Government of Yukon and its corporations;  
    - Government of Canada and its corporations;  
    - Yukon First Nation governments; and  
    - Municipalities. |  
  - The program is in effect from March 26, 2020 to March 31, 2021.  
  - A maximum total of 10 days of wages per employee (not including benefits, payroll taxes or deductions) to allow for sick leave and/or for a 14-day self-isolation period.  
  - Employers can only access the program once per employee.  
  - The maximum daily rebate will be $378.13 per day per employee.46 | None available. |
| United States          | The FFCRA (March 18, 2020) is a temporary federal paid sick leave mandate that provides paid leave to workers who are ill with COVID-19, are quarantining, or are caring for |  
  - All employees of covered employers are eligible for two weeks of paid sick time for specified reasons related to COVID-19. |  
  - The FFCRA allows qualified employees:  
    - Two weeks (up to 80 hours) of paid sick leave at the employee’s regular rate of pay; or | Physical Distancing:  
  - A 2020 study evaluated the impact of the FFCRA on physical distancing and reported that after the policy was introduced: |
<p>|                         | Family First Coronavirus Response Act (FFCRA)47 | | | |</p>

</table>
| United Kingdom         | Statutory Sick Pay (SSP) | - SSP is paid by an employer to all employees who are off work because of sickness for longer than three consecutive workdays but fewer than 28 weeks.  
- Applicants must give their employer a fit note if they are off sick for more than seven days in a row (including non-working days). | - To qualify for SSP applicants must:  
  o Be classed as an employee and have done some work for an employer;  
  o Earn an average of at least $207.15 CAD per week;  
  o Have been ill, self-isolating or ‘shielding’ for at least four weeks. | - Applicants can receive $167.08 CAD per week if they are too ill to work.  
- It is paid by their employer for up to 28 weeks. | - None available. |
|                        |                 | - Employees employed for at least 30 days are eligible for up to an additional 10 weeks of paid family leave to care for a child under certain circumstances related to COVID-19. | - Two weeks (up to 80 hours) of paid sick leave at two-thirds the employee’s regular rate of pay; and  
- Up to an additional 10 weeks of paid expanded family and medical leave at two-thirds the employee’s regular rate of pay. | - The average daily hours at home per day increased 4.2%;  
- The average hours not at home per day and working decreased by 7.7% and 6.1% post-policy. | |

Case Counts:  
- A 2020 study reported that between March 6, 2020 and May 11, 2020, the FFCRA gave workers new access to guaranteed sick leave was associated with:  
  o Approximately 400 fewer COVID-19 cases per state per day (~1 case per 1,300 workers), representing a 56% decrease in infections in these states.

If an employee is off work with any other illness, they can get a fit note from a GP or hospital doctor that will state the employee is either ‘not fit for work’ or ‘may be fit for work’ (Government of UK, n.d.).

d The website reported figures of GBP £120. All Canadian Dollars (CAD) amounts were calculated using Purchasing Power Parities (PPPs) as published by the Organisation for Economic Co-operation and Development (OECD) for 2019 (1 British Pound [GBP] = 1.7429 CAD). PPPs are the rates of currency conversion that eliminate the differences in price levels between countries (OECD, 2019).

e The website reported figures of GBP £95.85. All Canadian Dollar (CAD) amounts were calculated using Purchasing Power Parities (PPPs) as published by the Organisation for Economic Co-operation and Development (OECD) for 2020 (1 British Pound [GBP] = 1.7429 CAD) (OECD, 2019).

| New Zealand COVID-19 Leave Support Scheme (CLSS) | • The CLSS is available for employers, including self-employed people, to help pay their employees who need to self-isolate and cannot work from home. This includes workers who:  
  o Cannot work because they are in one of the affected groups and have been told to self-isolate; and Sick with COVID-19; or  
  o Cannot work from home. | • Isolate because they have come into contact with someone with COVID-19;  
  o A 'fit note' (or sick note) if they are off sick for another reason;  
  o A letter confirming the date of their procedure if they have been advised to self-isolate before going into hospital for surgery. | The CLSS is paid as a lump sum and covers two weeks per employee from the date an application is submitted.  
  • The CLSS will be paid at a flat rate of:  
    o $538.94 CAD for people working 20 hours or more per week (full-time rate);  
    o $322 CAD for people who were working less than 20 hours per week (part-time rate).* | None available. |

* The website reported figures of NZD $585.80 and NZD $350.00. All Canadian Dollar (CAD) amounts were calculated using Purchasing Power Parities (PPPs) as published by the Organisation for Economic Co-operation and Development (OECD) for 2019 (1 New Zealand Dollar [NZD] = 0.92 CAD) (OECD, 2019).

¹ The website reported figures of EUR $350 and EUR $203. All Canadian Dollar (CAD) amounts were calculated using Purchasing Power Parities (PPPs) as published by the Organisation for Economic Co-operation and Development (OECD) for 2019 (1 EUR = 1.53 CAD). PPPs are the rates of currency conversion that eliminate the differences in price levels between countries (OECD, 2019).

² Not applicable: No statutory paid sick leave including for full-time employees.
